Summary

Vogt, R. & Oberprieler, C.: *Mauranthemum*, a new name for *Leucoglossum* B. H. Wilcox & al. non S. Imai (Compositae, Anthemideae). – Taxon 44: 377-378. 1995. – ISSN 0040-0262.

Mauranthemum is published as an avowed substitute for *Leucoglossum* B. H. Wilcox & al. 1993, which is an illegitimate later homonym of *Leucoglossum* S. Imai 1942. New combinations for four species and one subspecies are proposed.

The genus *Leucoglossum* B. H. Wilcox & al. was recently established in Bremer & Humphries (1993: 142) to include the annual species formerly placed in *Leucanthemum* sect. *Eunuchoglossum* DC. (Vogt, 1991). Unfortunately it is an illegitimate later homonym of *Leucoglossum* S. Imai (1942: 524), a name that is currently in use for a genus of the ascomycete family *Geoglossaceae* (Greuter & al., 1993; Eriksson & Hawksworth, 1993).

We are currently revising the genus. The following new generic name and new combinations are presented here to prevent spreading use of the illegitimate name.
